SOFTWARE REQUIREMENTS SPECIFICATION

Internet Banking System

Version: 1.0

Date: March 31, 2026

1. Introduction

1.1 Purpose

This Software Requirements Specification (SRS) document describes the functional and non-functional requirements for the Internet Banking System. It is intended to guide the design, development, and testing teams in delivering a system that meets the specified requirements.

1.2 Project Scope

The Internet Banking System is a web-based portal that serves as the primary interface for all banking services. The system allows clients to:

- Access and manage their bank accounts online.
- Perform inter-account transactions.
- View and inquire about previous transaction history.

The system also provides administrative features for bank administrators to manage users and monitor activity.

2. Overall Description

2.1 Product Perspective

The Internet Banking System is a standalone web-based application that interfaces with the bank's core banking infrastructure. The system will be accessible via modern web browsers on PC-based systems. It is designed to replace or complement existing manual or in-branch banking processes by providing clients with 24/7 online access to their accounts.

2.2 Product Features

The following are the high-level features of the Internet Banking System:

- Account Registration — New clients can register an account online.
- Secure Login — Clients authenticate using a secure login mechanism.
- Account Dashboard — Clients can view all linked accounts and their details.
- Transaction History — Clients can browse previous transactions for any account.
- Fund Transfers — Clients can initiate inter-account transfers.
- Admin Panel — Administrators can manage users and oversee system operations.

2.3 User Classes and Characteristics

The system serves two primary user categories:

User Class	Characteristics
Client	Bank customers who register and use the portal to manage accounts, view history, and perform transactions. Assumed to have basic internet browsing experience.
Admin	Bank employees with elevated privileges who manage user accounts, resolve issues, and monitor system activity. Assumed to have technical proficiency.

2.4 Design and Implementation Constraints

- Each user must have a unique user ID and duplicate accounts are not permitted.
- The system must include dedicated admin features and an admin panel.

3. System Features

This section describes the functional requirements of the Internet Banking System.

3.1 Functional Requirements

*Add New Banking Account Feature

ID	Feature	Priority	Description
FR-01	User Registration	High	The client shall be able to register a new account on the system by providing personal and banking information.
FR-02	Secure Login	High	The client shall be able to log into the system using a unique user ID and secure password authentication. *Using a secure Email and Password
FR-03	Account Dashboard	High	The client shall have direct access to all linked accounts, including balance information and account details.
FR-04	Transaction History	High	The client shall be able to view a history of previous transactions for each of their accounts. *Last 5 transactions only
FR-05	Inter-Account Transfer	High	The client shall be able to perform fund transfers between different accounts within the system.
FR-06	Admin User Management *Can admin update client account info except balance? *Disable client account is not supported *Add Search by ID	High	The admin shall be able to create, update, disable, and delete client accounts.
FR-07	Admin Monitoring	Medium	The admin shall be able to view all transactions and system.
FR-08	Logout	Medium	The client and admin shall be able to log out of the system securely, ending the session.
FR-09	Password Reset *Not supported in SIQS	Medium	The client shall be able to reset their password via a secure mechanism (e.g., email verification).

4. External Interface Requirements

4.1 User Interfaces

The system shall provide a clean, intuitive web-based user interface. The following UI requirements apply:

- The interface shall be accessible via standard PC web browsers.
- The login page shall present fields for User ID and Password, along with a login button and a password reset link. *Email not User ID and password reset link is not supported
- The client dashboard shall display account balances, a recent transactions summary, and navigation to all features.
- The admin panel shall display user management tools and system logs.
- All pages shall maintain a consistent layout with clear navigation menus and responsive feedback on user actions.

*Transactions History has its own page but dashboard shall display balance and account number
